

Method Documentation:

addAddress("123 Main Street, Anytown US 12345", "This is my house!")

The addAddress method takes the address as a string, and an optional HTML Message (string) which will display in the info window when the points marker is clicked. If no HTML Message is sent, then the address is shown in the info window

setAPIKey("12345ABCDEF")

You must have a Google API key to use the google map api. This simply sets up your map to use your key

printGoogleJS()

This includes the necessary javascript from Google. Must be placed between <head></head> in your document

showMap()

Displays the map on your page

showValidPoints(\$type,\$css_id)

\$type can equal "table" or "list"

ex: showValidPoints("table","my_id") -OR- showValidPoints("list","my_id")

Displays a table or an unordered list with an id of \$css_id containing all the valid points that are displayed on the map. Useful mainly for debugging but can be shown on the page for a nice way of showing your visitors what points are mapped on the Google Map

showInvalidPoints()

\$type can equal "table" or "list"

ex: showInvalidPoints("list","my_id") - OR - showInvalidPoints("table","my_id")

Displays a table or an unordered list with an id of \$css_id containing all the invalid points that are NOT displayed on the map. Useful mainly for debugging but can be shown on your page if you require it.

Customization Methods/Properties:

These methods are all OPTIONAL and all have defaults in place. They are here to customize your Phoogle Map if you want to.

setHeight(400)

would set the height of the Google Map to 400px

default: 300px

setWidth(500)

would set the width of the Google Map to 500px

default: 300px

zoomLevel=10

would set the initial zoom level of the map to 10, the range is 0-17. The default is 4, and show be what you would need most of the time.

default: 4

showControl=false

would not show the pan/zoom tools on the map

default: true

controlType='small' or 'large'

determines whether to use the small or large version of the map controls (large includes the slider)

default: small

showType=false

would not show Map | Hybrid | Satellite buttons on the map. Setting to true would show

default: true
